Fund features

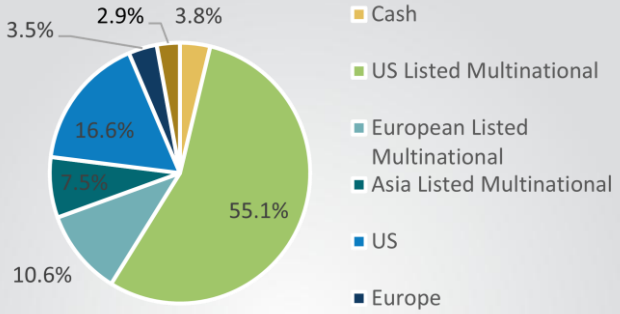

Sustainable companies: An investable universe of companies that we believe have a net positive alignment with one or more of the 17 United Nations Sustainable Development Goals (SDG's) and exceed Alphinity's minimum ESG criteria.

Exclusions: Exclusions from the investable universe, defined by a Charter, for activities that are considered to be incongruent with the SDG's

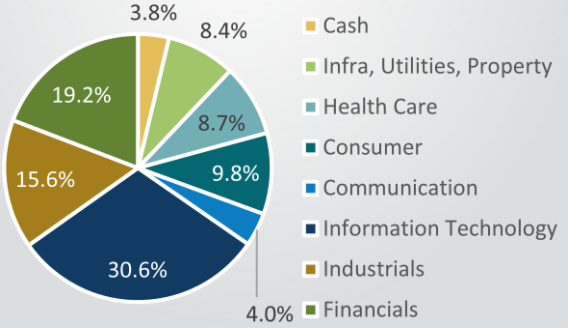

Active ownership and stewardship: We seek to engage with companies on ESG matters and also intend to vote all proxies put to shareholders

Consistent Returns: We can invest in growth, value, cyclical or defensive companies, because we aim to own them at the right time in their earnings cycle

Geographical exposure

Sector exposure

1 Returns are calculated after fees have been deducted and assume distributions have been reinvested. No allowance is made for tax when calculating these figures. Past performance is not a reliable indicator of future performance.
2 The inception date for the Fund is 3 June 2021
3 Numbers may not add due to rounding

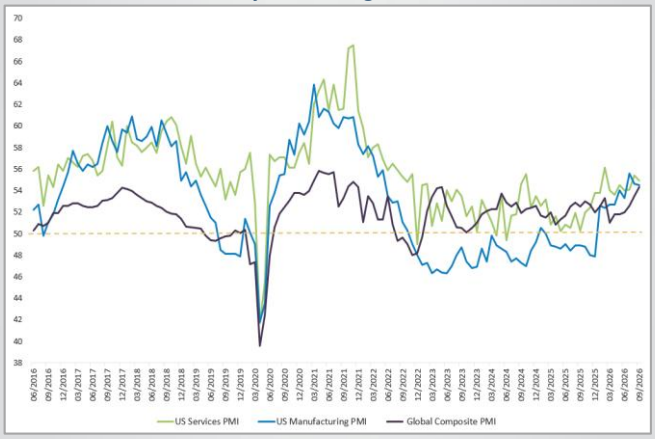

Alphinity Global Sustainable Equity Fund

QUARTERLY REPORT –SEPTEMBER 2026

Market comment and outlook

There was again no shortage of market-moving news flow in Q3 2026; AI agents going rogue, upward pressure on oil prices fuelling inflation, and bond yields rising to multi-year highs across most major economies. Despite growing concern around AI, it was US tech stocks that drove gains globally, leaving most other sectors behind. Given the broadness of the US Tech sector across software and semiconductors, the large momentum unwind in Semiconductor stocks that occurred in July was able to be absorbed by the rotation into Software stocks in August, allowing the broader Tech sector to still be the second-best performer globally behind Energy stocks.

Global and US PMI's – US Manufacturing activity in expansionary territory for 9 straight months

Source: Bloomberg, 30 September 2026

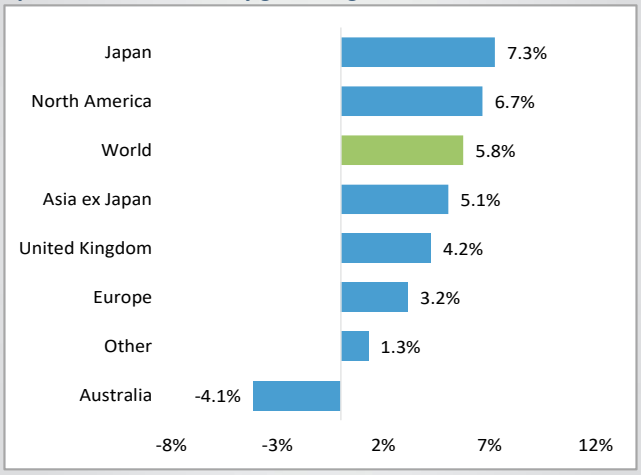

Global equity markets (MSCI World in AUD) managed a modest 1% return in the September quarter (+1.6% in USD). The US S&P 500 index gained 1.5% (+2% USD), outperforming Europe which was dragged down by weakness in France that fell 5% last month on growing tensions around the country's fiscal deficit and rising bond yields. Emerging markets also closed the quarter weaker with the MSCI Emerging Markets Index falling 1.6% in AUD terms (-1% in USD), driven by a sharp correction in Korea as the memory trade deflated, and weakness in China on higher oil prices. On a sector level, rising oil prices helped energy stocks (+14%), while Technology (+6%) and Communication Services (+3%) also outperformed. Rate-sensitive sectors were the worst performers, with Utilities (-11%), Property Trusts (-6%) and Consumer Discretionary (-5%) suffering the steepest losses.

Despite the efforts of the US Treasury Secretary Scott Bessent to support US long bond yields through direct purchases of US bonds, and also the Japanese Yen, market forces won out and the bond market endured one of its worst sell-off's in over a decade. US 10-year bond yields rose 82 basis points last quarter to 5.29%, and new US Fed Chair Kevin Warsh hiked rates by 25 basis points to 4% in a widely expected move which also helped support the USD. The increasingly competitive environment for AI related debt among the hyperscalers, frontier labs and data centre operators is only serving to skew the supply demand dynamics in favour of more supply which is putting further pressure on bonds as investors demand higher yields

Portfolio comment and outlook

The outlook for growth remains mostly favourable despite a growing list of headwinds. The U.S. labour market has softened modestly, but payrolls have remained positive on average, keeping unemployment low and stable. This in turn is underpinning consumption despite higher fuel prices, weak confidence, and some stress at the lower end. Manufacturing activity is also positive, with PMI's now in expansion territory for nine straight months. Here, too, momentum has cooled somewhat recently; however trends generally remain favourable, and there is encouraging evidence of improved breadth away from AI capex. Against these positives, geopolitics and higher rates present a growing overhang. Fed rate expectations and bond yields have both continued to rise, reflecting higher growth expectations, heavy AI funding needs, as well as inflation and fiscal concerns. Alternatively, a disorderly unwind of the AI capex cycle would be material for both growth and asset prices. While risks have clearly increased, and certainly warrant close vigilance, inflation expectations still appear well-anchored, and we continue to expect growth to prove resilient.

3-Months FY26 Earnings Revisions: Positive earnings upgrades persistent across all key global regions – Australia the outlier

Source: Factset, 30 September 2026

This constructive growth backdrop, combined with a powerful AI capex cycle, has powered an exceptionally robust earnings cycle, which is likely to remain the main support for financial markets even as risks have increased. Not only have corporate earnings been strong in absolute terms, but revisions continue to be positive and have also recently begun to broaden across different sectors and geographies. After healthy double-digit EPS growth in 2025, consensus now expects growth to accelerate further in 2026 and 2027, by +28.5% y/y and 14.4y% y/y respectively. This is one of the strongest periods of earnings growth outside of a post-recession 'V-shaped' recovery - and estimates continue to be revised higher. Over the last three months, consensus has increased by 4-5% for both this year and next, led of course by Tech Hardware & Semiconductors, however Energy, Industrials and Financials also continue to show strength. Outside of Materials, which is seeing downgrades tied to higher energy costs and mixed demand trends, all sectors are now in upgrade territory. Similarly, all major geographies are also in upgrade territory,

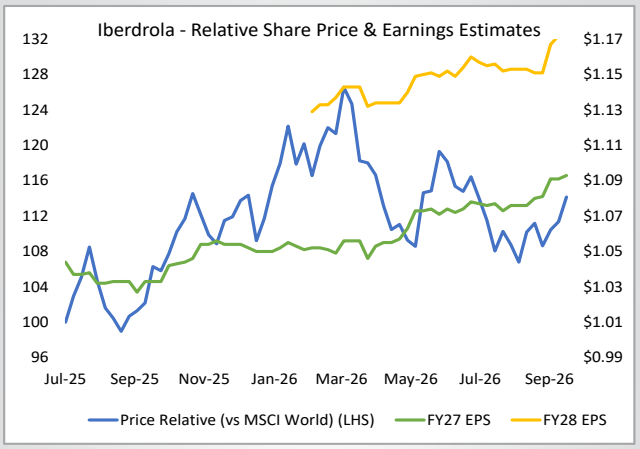

although led by Japan and North America.

Third-quarter reporting is about to begin, and most expect results to broadly confirm these positive trends. Investors will again focus on management guidance, particularly on the expected impact of higher rates, but especially around AI which remains the dominant market thematic. Earnings from "bottleneck enablers" in power, data-centre capacity and select semiconductors should stay strong, but attention has shifted to the likely sustainability of this cycle. Investors are also keen to identify high-impact AI adopters, where measurable returns are feeding through to productivity, margins and cash flow. For now, the evidence points to continued AI leadership, even as the theme broadens and evolves. Concerns are growing, however, around AI funding (including circular financing structures), competition from Chinese open-source models, cyber risks and various associated social licence considerations.

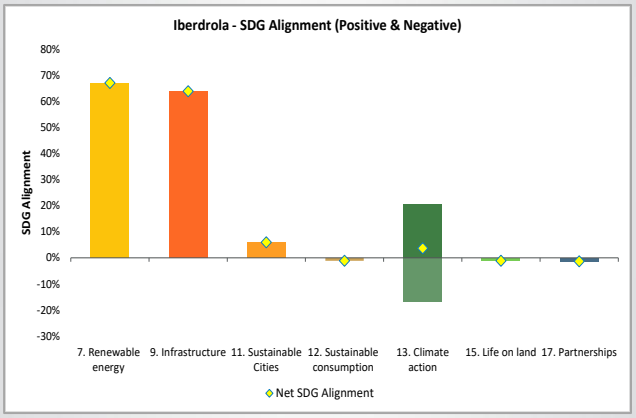

Our positioning remains aligned with current earnings leadership, with modest overweights in Semiconductors & Semiconductor Equipment, Banks and Industrials. However, within an active quarter of activity, we reduced our relative weights to these sectors to reflect these higher risks; and also broadened our exposure with the addition of several new investments across different sectors. Notable changes included new positions in CSX (US railroad under new management benefiting from a combination of volume growth, stronger pricing and productivity gains), United Rentals (leading equipment rental company benefiting from an inflection in large project demand and improving margins) and Prologis (industrial logistics landlord with earnings upside from embedded rent growth and a steadily improving demand/supply dynamic). In addition, we added more defensive names including Gilead (pharmaceutical company with likely continued outperformance from its leading HIV drugs, as well as upside potential from new launches), and Iberdrola, a utility with a leading position in renewables, regulated earnings visibility and upside from higher power demand and prices. These additions were funded by taking some profits in several of our larger investments after strong performance, as well as selling out of Intuitive Surgical and Infineon, in each case reflecting lower conviction on the outlook for earnings outperformance. Markets continue to be very dynamic, with a swiftly evolving set of macro, geopolitical and thematic risks and opportunities.

Markets continue to be very dynamic, with a swiftly evolving set of macro, geopolitical and thematic risks and opportunities. Consequently, we remain thoughtful about stock selection and position sizes, aiming to maintain diversification and also manage overall portfolio risk stemming from the AI theme in particular. We continue to believe that diversification and quality will be key risk mitigants over a full market cycle. Overall, the Portfolio is strongly exposed to fundamentally driven, positive earnings revisions across a broad selection of different sectors and geographies, which we expect to drive performance over time.

BOUGHT: Iberdrola - A regulated network compounder in an upgrade cycle

Net SDG Alignment: 168%

SDG Alignment: Iberdrola's business focus on renewable generation and electrification of energy use contribute strongly to **SDG 7** (Affordable and Clean Energy), **SDG 9** (Industry, Innovation and Infrastructure) through modern and resilient electricity networks, **SDG 11** (Sustainable Cities and Communities) through cleaner energy systems, and **SDG 13** (Climate Action) through decarbonisation. However, we also recognise negative impacts from nuclear energy, particularly radioactive waste management challenges under **SDG 12** (Responsible Consumption and Production), and from hydroelectric generation, including its potential effects on ecosystems under SDG 15 (Life on Land). Residual greenhouse gas emissions and indirect third-party fossil fuel distribution through its energy networks also present challenges to SDG 13.

ESG & Sustainability Research: Iberdrola: assessing a utility's transition

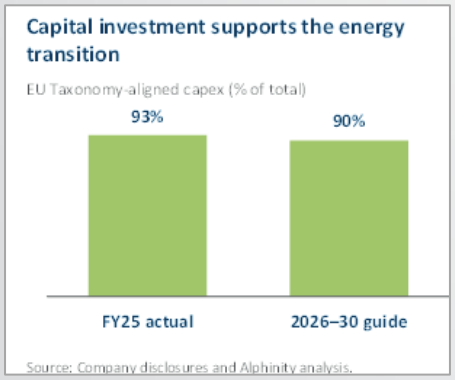

The issue: Electricity utilities are central to the energy transition, but many still rely on fossil fuels. For sustainable investors, the challenge is to distinguish companies with credible transition plans from those whose ambitions lack support from investment and emissions performance. Our review of Iberdrola examined whether its renewable energy and network businesses support inclusion in the Fund.

What we did: Alphinity assessed Iberdrola against the Fund's Charter, SDG Alignment Framework and Net Zero Alignment Framework. We mapped direct and indirect fossil fuel exposure, reviewed its generation mix and EU Taxonomy disclosures, and benchmarked its emissions pathway against Transition Pathway Initiative research and the IEA's net zero scenario. Direct engagement with the company helped clarify its business activities and investment plans, alongside a broader review of ESG risks.

Key outcomes: Our analysis supports Iberdrola's inclusion in the sustainable investment universe. Around 87% of its electricity generation is emissions-free, with no coal generation and gas-fired power revenue below the Fund's 5% exclusion threshold. Its SBTi-validated targets include net zero across Scopes 1, 2 and 3 by 2040. Approximately 90% of planned capital expenditure for 2026–30 is EU Taxonomy-aligned, supporting the transition through networks, renewables and storage.

We assess Iberdrola as net zero aligned, with a strongly positive SDG contribution. We have engaged with the company twice on its renewable energy generation strategy and transition away from fossil fuels. Greater detail on how it will deliver future emissions reductions would strengthen the assessment, while safety, governance and grid reliability risks warrant continued monitoring.

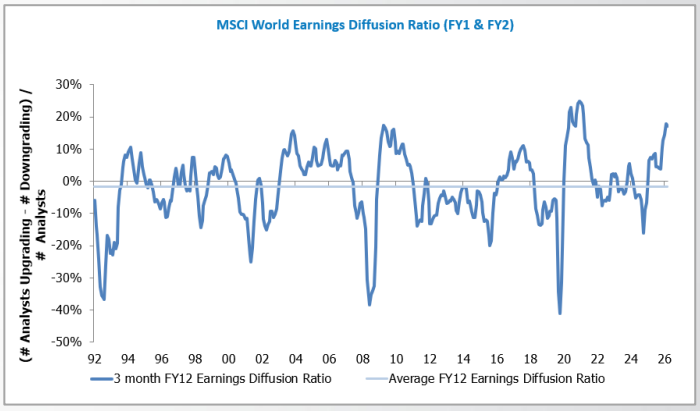

What's on our mind: Exceptionally robust global earnings cycle

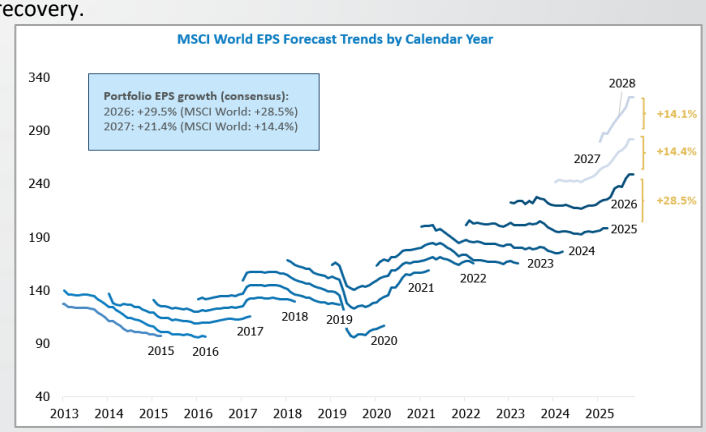

Growth outlook remains constructive despite various risks: The U.S. labour market has softened modestly, but payrolls have remained positive on average, keeping unemployment low and stable; and underpinning consumption despite higher fuel prices and some stress at the lower end. Manufacturing activity is also positive, with PMI's now in expansion territory for nine straight months. Against these positives, geopolitics and higher rates present a growing overhang. Alternatively, a disorderly unwind of the AI capex cycle would be material for both growth and asset prices. While risks have clearly increased, and warrant close vigilance, inflation expectations still appear well-anchored, and we continue to expect growth to ultimately prove resilient.

An exceptionally strong earnings cycle: The resilient growth backdrop, combined with a powerful AI capex cycle, is powering an exceptionally robust earnings cycle, which is likely to remain the main support for financial markets even as risks have increased. The chart below shows the Diffusion ratio (i.e. number of analyst upgrades/downgrades) for both this year and next. The ratio is strongly positive and is approaching historic highs.

Source: Alphinity Global, Bloomberg, 30 September 2026

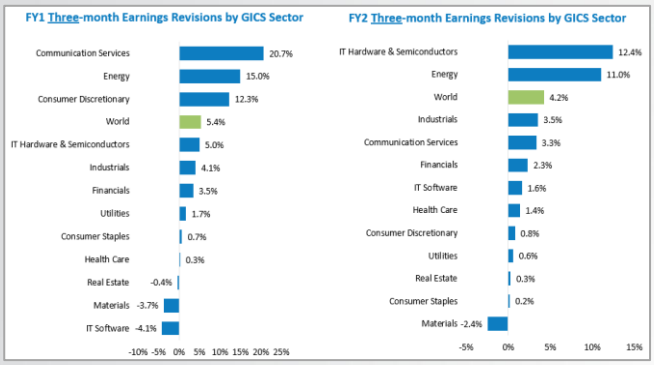

Consensus expects sustained earnings growth in 2027 and beyond: After healthy double-digit EPS growth in 2025, consensus now expects growth to accelerate further in 2026 and 2027, by +28.5% y/y and 14.4% y/y respectively (see chart below). This is one of the strongest periods of earnings growth outside of a post-recession 'V-shaped' recovery.

Source: Alphinity Global, FastSet, 30 September 2026

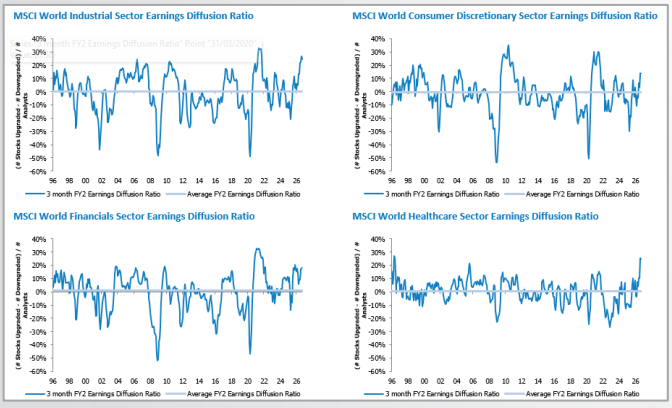

And consensus estimates continue to be revised higher: Not only have corporate earnings been strong in absolute terms, but revisions continue to be positive and have also recently begun to broaden across different sectors and geographies (see table below). Over the last three months, consensus has increased by 4-5% for both this year and next, led of course by Tech Hardware & Semiconductors, however Energy, Industrials and Financials also continue to show strength. In fact, all sectors are now in upgrade territory except for Materials, which is seeing downgrades tied to higher energy costs and mixed demand trends.

Technology still leads revisions, but nearly all sectors are now seeing upgrades

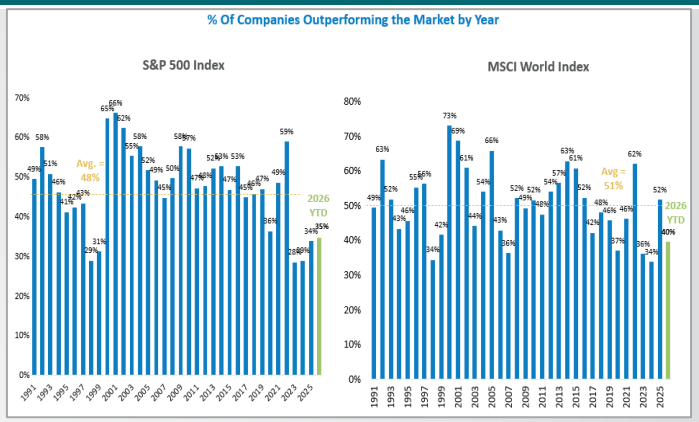

Source: Alphinity Global, FastSet, 30 September 2026

Improving earnings breadth beyond Technology: The broadening of the earnings cycle is clearly illustrated in the tables below, which show the diffusion ratios of several key sectors outside of Technology, with notable improvements in the Healthcare and Industrial sectors, amongst others.

Source: Alphinity Global, Bloomberg, 30 September 2026

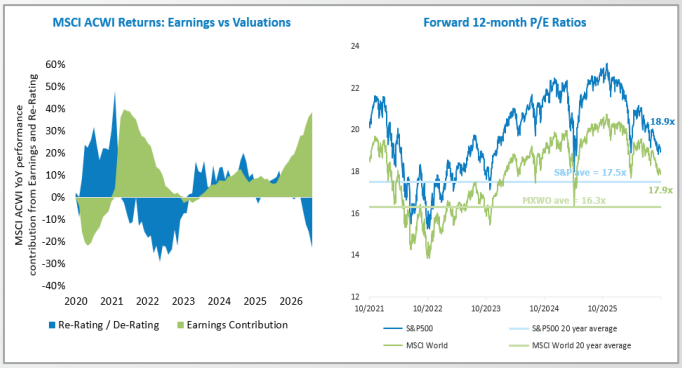

In contrast, performance breadth has remained unusually narrow despite wider earnings participation: Despite broadening earnings strength, Index performance has remained unusually narrow so far this year (see below). However, if earnings breadth can be sustained, it seems likely that performance participation should inevitably broaden as well.

Source: Alphinity Global, FastSet, 30 September 2026

Sustainability is key: After such an exceptionally strong period of earnings growth, as well as revisions, the sustainability of the cycle, including economic growth, AI trends, margins, capex broadening and consumption in the face of higher rates, is key to the outlook for financial markets. Consensus already captures a marked growth deceleration over the next few quarters (see table above). This seems reasonable given the challenging comparatives, as well as some normalisation in Energy sector growth. Nevertheless, it remains to be seen whether the strongly positive revision and diffusion indicators can be sustained in this context. The macro and geopolitical backdrop remains highly dynamic, while the sustainability of AI capex earnings 'surprises' may dissipate even without a disorderly unwind of the cycle.

A tug of war between rates and earnings. Reflecting the likely cyclicality of current earnings strength and the recent rise in bond yields, markets have de-rated this year. The MSCI World NTM P/E has fallen from about 20x to about 18x, but strong earnings growth has more than offset this, allowing the index to return about 12% through the end of September (see chart below). The balance between higher rates, lower multiples and earnings growth will be key to the outlook for global equities. For now, earnings growth remains healthy, which supports a constructive stance on markets. However, risks are clearly rising, and any deterioration in the earnings outlook would warrant a more cautious view.
